

StarChestCreator

Unlocking Progressive Rewards

Thank You!

As an indie game developer for over 15 years, my journey has been fueled by an unyielding passion for creating games and a relentless pursuit of my dreams. Each asset you purchase not only helps me survive in this challenging industry but also empowers me to continue crafting unique and exciting games.

Your support is more than just a transaction; it's a partnership in creativity and innovation. With every asset you buy, you become a vital part of my story, helping me bring my visions to life and inspiring me to push the boundaries of what's possible.

Thank you for being a crucial part of my journey. Your support means the world to me, and I can't wait to share the incredible games your contributions help create.

Keep dreaming, keep playing, and keep supporting indie developers like me. Together, we're making something truly special.

Warm regards,
Witty Fox

How to?

Star Manager is responsible for managing the collection of stars, updating the UI to reflect progress, and interacting with a ChestManager to handle rewards when enough stars are collected. It uses a star progress bar and animations to enhance the player experience and maintains the state of star collection across game sessions using PlayerPrefs

Star Prefab

Prefab used to visually represent stars in the UI.

Star Parent

The parent transform where instantiated stars are organized in the UI.

Remaining Time

Tracks the remaining time globally, used for calculating star rewards.

Star Text

Displays the current progress of collected stars (e.g., 10/20).

Star Fill Bar

UI element showing the progress of collected stars towards the target as a fillable bar.

Target Stars

The initial number of stars required to open the chest and reach the next chest.

Star Multiplier

Multiplies the target stars each time a new chest is unlocked.

Total Stars

Total stars collected across all game sessions.

Current Stars

Stars collected towards the current target in this session.

Chest Manager

Reference to the ChestManager for triggering chest interactions and rewards.

Chest Ready To Open

Boolean indicating if the chest is ready to be opened.

Star Bar Game Object

UI GameObject for the star progress bar, which can be shown or hidden.

Three Star Threshold

Time threshold for earning 3 stars as a reward (50 seconds or more).

Two Star Threshold

Time threshold for earning 2 stars (30-49 seconds).

One Star Threshold

Time threshold for earning 1 star (1-29 seconds).

Chest Manager manages the selection, animation, reward spawning, and claiming processes for chests in a game. It handles chest animations via the ChestAnimator and spawns rewards dynamically, allowing for a smooth visual presentation. The system tracks selected chests using player preferences to ensure variety and continuity across sessions.

Chest SO List

List of all chest ScriptableObjects, each defining a unique chest and its rewards.

Spawn Point

Starting position for spawned rewards (e.g., coins or items).

Reward Container

Container where reward objects are instantiated.

Speed

Speed of movement for rewards as they travel to their target points.

Scale Speed

Speed at which rewards scale during animations.

Chest Game Object

Reference to the physical chest GameObject for managing its state.

Currency Spawner manages the spawning, movement, and pooling of currency and shadow objects in a visually appealing way. It supports various scatter patterns and animations using bezier curves and object pooling for efficient performance.

Camera

Reference to the UI Camera, used for screen-to-world space conversions.

Direct To Target

Boolean to determine if objects move directly to the target without scattering.

Curve Strength

Determines the strength of the bezier curve used for movement animations.

name: Identifier for the currency type.

startPoint, endPoint: RectTransform references for start and target positions.

currencyPrefab, shadowPrefab: Prefabs for visualizing currency and its shadow.

currencyContainer, shadowContainer: Containers for pooling and hierarchy organization.

poolSizeOfCurrencies: Number of pooled objects.

delayBetweenSpawningCurrencies: Delay between spawns.

scatterDistance, scatterDuration: Parameters for scatter behavior.

moveDuration: Time for objects to move to the target.

particleTag: Particle effect tag for visual effects.

scatterMode: Determines scattering behavior (Around, Upwards).

currencyPool, shadowPool: Lists of pre-instantiated objects.

availableCurrencies, availableShadows: Queues of available objects for reuse.

Particle Pool provides an optimized system for managing and reusing particle effects in Unity through object pooling. It significantly reduces performance costs by recycling objects instead of instantiating and destroying them repeatedly.

Tag

Acts as an identifier for different types of pools. Each pool is uniquely recognized by its tag.

Prefab

Specifies the particle effect GameObject to be instantiated in the pool.

Size

Defines the initial number of particle objects to instantiate in the pool.

Parent

An optional Transform to organize the instantiated particle objects hierarchically in the Unity scene.

It integrates sprite-based animations, particle effects, UI management, and smooth transition effects to deliver an engaging player experience. The chest goes through various states such as idle, opening, and claiming rewards, with corresponding visual and motion effects. The system supports customizations like frame rates, animation sequences, particle delays, and UI overlays, enabling seamless integration into your game for a polished and immersive reward mechanism.

Chest Image

Represents the UI image displaying the chest, enabling sprite animations and visual updates.

Sprite Frames

Holds all the sprites used for chest animations, segmented into specific sequences (e.g., idle, open, claim).

idleFrames, openChestFrames, claimChestFrames

Separate lists for different chest animation states for better organization and control.

Chest Particle

A particle system triggered during specific animations to enhance visual effects.

Spawn Point, Target Point

Define the start and target positions for the chest, enabling smooth movement animations.

Open Button, Claim Button

UI buttons to handle player interactions for opening the chest or claiming rewards.

Dark Overlay

A UI element to darken the background and focus attention on the chest.

Thank you for choosing Funfab Studio!

I wish you all the success in your game development journey. May the assets you've chosen help you achieve great success and create unforgettable experiences. Good luck, and may your games reach new heights!

If you need assistance with this asset, please feel free to reach out to me at **funfabstudio@gmail.com**
